

Rubrik Cloud Data Management

Search anything. Recover anywhere. Unlimited scale.

Enterprises are shedding complex, legacy multi-tiered solutions for simplified data management purpose-built for cloud. Reduce the complexity by 70%+ with a converged software platform that is radically simple to use.

Rubrik Cloud Data Management delivers data protection, search, analytics, compliance, and copy data management for hybrid cloud enterprises. With Rubrik, enterprises leveraging SwiftStack can deliver near-zero recovery time objectives (RTOs), achieve up to 50% in immediate hard savings, and unleash unprecedented simplicity from deployment to daily management.

Together, Rubrik and SwiftStack unlock cost-effective and scalable data archival across hybrid cloud environments. Automate long-term data retention by just moving a slider. Instantly access archived files, even in the cloud. Save time and costs with automated policies versus offloading data to tape.

As an active archive for your data, SwiftStack eliminates storage silos by allowing you to start small and seamlessly scale capacity to many petabytes, all in a single namespace. It is software that runs on standard server hardware, creating a cost-effective storage cluster that fits your data protection needs of today and tomorrow.

You can end the use of tape or complex replication software because a SwiftStack cluster seamlessly spans multiple data centers. Built-in global replication allows you to designate where your data needs to live to ensure backup data is available even if a server, site, or network become unavailable. If a remote site cannot be used, data can automatically be replicated to a bucket in Amazon Web Services or Google Cloud Platform.

For Enterprises looking to back up on-premises or across data centers in the most modern, scalable, and cost-efficient way, SwiftStack will allow you to protect more data while driving out significant capital and operating costs.

HIGHLIGHTS

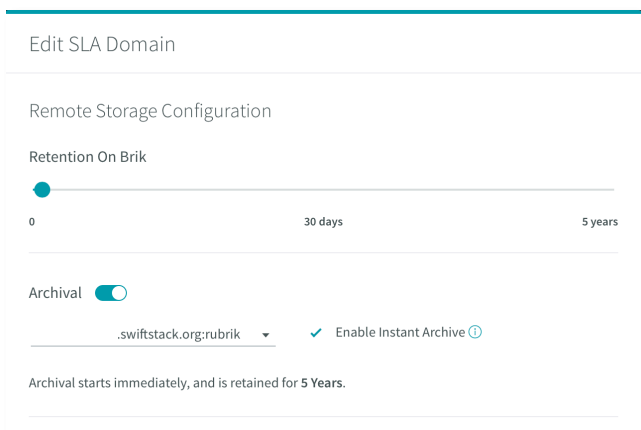

- **Policy-Driven Intelligence:** One policy engine to automate backup, replication, and archival schedules with just a few clicks.
- **Instant Access:** Locate archived data instantly with global search, on-prem and in the cloud.
- **Lower TCO:** Eliminate complexity of legacy multi-point solutions with a single solution.
- **Unlimited Scale:** Grow as you grow with linear scale in capacity and performance.
- **Cloud Mobility:** Archive to lower-cost on-prem or public cloud storage.
- **Deduplication:** Reduce transfer and storage costs by archiving only deduplicated data.
- **Granular Recovery:** Recover your archived data at a snapshot or file-level.

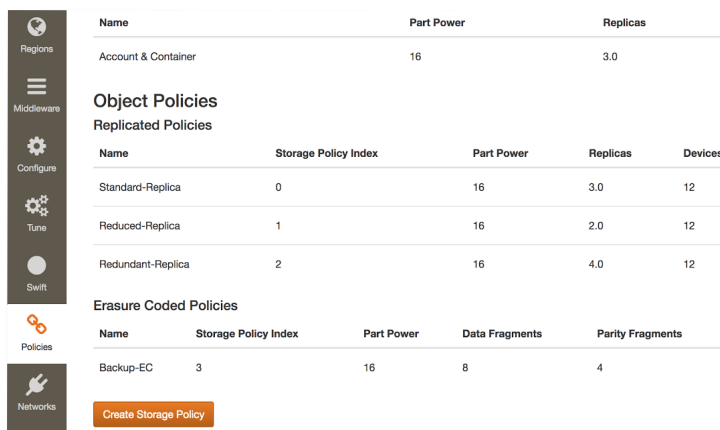

CERTIFICATION

- Rubrik 3.4.x or later
- SwiftStack 5.10.x or later

How Rubrik and SwiftStack Work Together

With Rubrik and SwiftStack, users can securely access data instantly, automate protection policies, and orchestrate data across data centers and the public cloud. Automate compliance for backup, replication, and archival with just a few clicks in Rubrik’s single policy engine. Just select desired snapshot capture frequency, retention duration, and archival target. SwiftStack delivers granular protection policies, allowing you to select the desired location. SwiftStack provides the capability of assigning different storage policies per data set. You set the policies. We automate the rest.

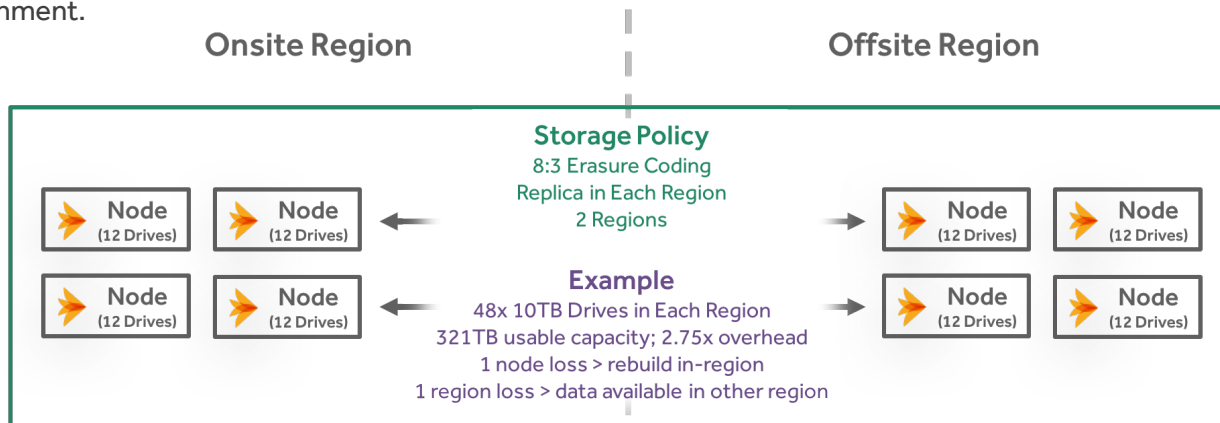

Name	Storage Policy Index	Part Power	Replicas	Devices
Replicated Policies				
Standard-Replica	0	16	3.0	12
Reduced-Replica	1	16	2.0	12
Redundant-Replica	2	16	4.0	12
Erasure Coded Policies				
Name	Storage Policy Index	Part Power	Data Fragments	Parity Fragments
Backup-EC	3	16	8	4

Example SwiftStack Archive Configuration

Below is an example SwiftStack configuration, where a complete replica of the data exists in each geographic region, with fourteen nines durability using erasure coding. SwiftStack has been designed from the ground up to support a wide range of infrastructure designs, allowing hardware to be chosen that is optimal for each environment.
