

June 2018

## Welcome to the SwiftStack Monthly Newsletter!

Hello,

Nearing the midpoint of 2018, we see that the demand for Multi-Cloud Data Management is growing. Our everyday discussions surround deployments that require the the freedom to move workloads between clouds with universal access to data across on-premises and public infrastructure.

With product updates like the new SwiftStack 1space capabilities and partner engagements during this month's Cisco Live show, we have some exciting updates for you.

Respectfully,

The SwiftStack Team

## Product

### SwiftStack 1space Facilitates Multi-Cloud Capabilities

"The software vendor is contributing its core multi-cloud technology to a new open source project called 1space. SwiftStack 1space replaces the vendor's Cloud Sync, which enabled two-way data synchronization between on-premises private cloud storage and public cloud storage but did not include a single namespace."

### 1space: Demo of Single Storage Namespace Between Clouds

The 1space connector is a container that runs in the cloud to provide a single storage namespace in the public cloud for data.

## Partner Update

### Cisco Live: Orlando, FL (June 10-14, 2018)

SwiftStack, a Cisco Preferred Solution Partner, exhibited at Cisco Live! If you attended, we hope you were able to see our Multi-Cloud Use Case workflow in action. If not, let us know and we can arrange an exclusive demo for you.

### Cisco Partnership with SwiftStack

Siva Sivakumar, Senior Director of Data Center Solutions with Cisco, and Joe Arnold, Founder/CPO with SwiftStack, discuss their partnership and the value behind their integrated Multi-Cloud solution.

## Industry Update

### SwiftStack Announces 1space

"SwiftStack recently announced 1space, and I was lucky enough to snaffle some time with Joe Arnold to talk more about what it all means. I thought it would be useful to do a brief post, as I really do like SwiftStack, and I feel like I don't spend enough time talking about them."

### SwiftStack Launches 1space to Unlock New Multi-Cloud Use Cases

1space is also a new open source project, and is joined as new SwiftStack open source endeavours by MetaSync, which like 1space, also brings new multi-cloud technologies to the open source community.

## Blog

### Introducing SwiftStack 1space - A Single Storage Namespace that Spans Cloud

By Joe Arnold

SwiftStack 1space enables a single object namespace between object storage locations. This enables application portability and freedom between clouds and on-premises. Additionally, 1space enables data lifecycleing, migration and data protection capabilities between clouds.

### Harnessing the Power of Metadata in a Multi-Cloud World (Part 1)

By Ted Butler & Chris Nelson

"Organizations of today can easily generate and persist large amounts of data, but this does not come without a challenge: The question, "How can we store all of this data?" has been replaced with, "How can we derive value from all of this data?" Without a logical way to locate something or to perform analysis across a pile of data, the value of the data is lost. Metadata solves that problem."

### Cisco Live 2018: Top 3 Market Developments Since Last Year's Conference

By Greg Govatos

"A different approach to health care data management is necessary. No longer can data remain captive in proprietary, department-level infrastructure silos, but rather, it must be easily accessible at all clinical touch points of a patient's journey."
